

Construindo KPIs de Vendas com SQL Server — Dataset Olist

Estou desenvolvendo um projeto de análise de dados usando o dataset real do marketplace brasileiro Olist (2016–2018), com mais de 100 mil pedidos.

O objetivo é monitorar os principais indicadores de vendas **semana a semana**, usando apenas SQL Server.

KPI 1 — Receita Total

```
SELECT
    DATETRUNC(week, o.order_purchase_timestamp) AS semana,
    ROUND(SUM(oi.price + oi.freight_value), 2) AS receita_total
FROM Olist_orders_dataset o
JOIN Olist_order_items_dataset oi
    ON o.order_id = oi.order_id
WHERE o.order_status = 'delivered'
GROUP BY DATETRUNC(week, o.order_purchase_timestamp)
ORDER BY semana;
```

KPI 2 — Número de Pedidos

```
SELECT
    DATETRUNC(week, o.order_purchase_timestamp) AS semana,
    COUNT(DISTINCT o.order_id) AS total_pedidos
FROM Olist_orders_dataset o
JOIN Olist_order_items_dataset oi
    ON o.order_id = oi.order_id
WHERE o.order_status = 'delivered'
GROUP BY DATETRUNC(week, o.order_purchase_timestamp)
ORDER BY semana;
```

KPI 3 — Ticket Médio

```
SELECT
    DATETRUNC(week, o.order_purchase_timestamp) AS semana,
    ROUND(SUM(oi.price + oi.freight_value) /
        COUNT(DISTINCT o.order_id), 2) AS ticket_medio
FROM Olist_orders_dataset o
JOIN Olist_order_items_dataset oi
    ON o.order_id = oi.order_id
WHERE o.order_status = 'delivered'
```

```
GROUP BY DATETRUNC (week, o.order_purchase_timestamp)  
ORDER BY semana;
```
